<b>EU Financial Transaction Tax</b>	<p>European Commission issued in February 2013 a proposal for a common financial transaction tax that would be applied by 11 participating EU member states.</p> <p>Discussions between the 11 member states are ongoing. On 27 January 2015 the Finance Ministers of the participating member states issued a public statement renewing a commitment to make progress.</p> <p>Target implementation date is 1 January 2016, but many observers see this as unrealistic.</p>	<ul style="list-style-type: none"> <li>• Currently includes securities lending and repo transactions</li> <li>• Proposal has extra-territorial reach and could effect transactions outside the member states on a global scale</li> <li>• Transaction taxes implemented in France and Italy currently exclude temporary transfers including securities lending and repo</li> </ul>	<ul style="list-style-type: none"> <li>• Increased transaction costs</li> </ul>	<ul style="list-style-type: none"> <li>• Potential increased reporting, withholding and payment requirements</li> </ul>	<ul style="list-style-type: none"> <li>• Reduced demand and revenue for affected transactions</li> </ul>

<b>US Risk-Based Capital Requirements</b>	<p>Finalized July 2013.</p> <p>US rules may be amended once Basel Committee revises the standardized approach. In December of 2014 Basel published a consultative document proposing revisions to the standardized approach for credit risk.</p> <p>Advanced approaches banks must meet minimum capital requirements under the advanced approaches and the standardized approaches.</p>	<ul style="list-style-type: none"> <li>For certain large US bank holding companies, the Collins amendment establishes a floor requiring such institutions to calculate risk weighted assets under both standardized and advanced approaches and meet minimum capital requirements under both approaches</li> <li>Non-US institutions are not subject to the Collins amendment. However, in December of 2014 Basel published a consultative paper on the design of a capital floor based upon the standardized approach</li> <li>More favorable treatment for securities financing transactions and derivatives cleared through a QCCP</li> </ul>	<ul style="list-style-type: none"> <li>Many US borrowers are currently leverage constrained</li> <li>Capital constrained borrowers may demand more transactions be collateralized by cash</li> <li>May seek to do some transactions through QCCPs</li> <li>May look to match currencies between loan and collateral</li> </ul>	<ul style="list-style-type: none"> <li>Significant increase in capital cost to provide various types of counterparty default indemnification</li> </ul>	<ul style="list-style-type: none"> <li>May see increased demand for broader set of non-US collateral</li> <li>May see increased cost for indemnification</li> <li>May see lower demand for low spread transactions</li> </ul>

<b>US Supplementary Leverage Ratio</b>	Supplementary Leverage Ratio effective on January 1, 2018 with reporting beginning on January 1, 2015.	<ul style="list-style-type: none"> <li>• Measure of tier 1 capital divided by GAAP assets plus certain off-balance sheet items</li> <li>• BHCs with more than \$700 billion in total consolidated assets or \$10 trillion in assets under custody are required to maintain an “enhanced” supplemental leverage ratio of 5%, and any insured depository institution subsidiary is required to maintain a supplemental leverage ratio of 6%</li> <li>• The international Basel III leverage requirement is 3%. Previously most European countries did not have a leverage ratio</li> </ul>	<ul style="list-style-type: none"> <li>• Many large US borrowers are currently leverage constrained not risk-based capital constrained</li> <li>• May result in balance sheet reductions</li> <li>• May engage in more non-cash transactions</li> <li>• Could seek QCCP solution for certain trades to get additional GAAP netting benefits</li> </ul>	<ul style="list-style-type: none"> <li>• Minimal impact. Borrower default indemnification included in denominator using current exposure (collateral value – loan value) methodology</li> </ul>	<ul style="list-style-type: none"> <li>• Increased demand for non-cash transactions</li> <li>• May result in reduced level of repo investment opportunity</li> <li>• Addition of QCCPs as counterparties may allow for greater utilization and reinvestment opportunity</li> </ul>
