## Data Term Dictionary

**Days to cover** – Indication of time required to buy back the total value of securities borrowed based on current cash market volume. Calculated as the value on loan divided by the 30 trading day average cash market turnover, in days.

**Short squeeze score** - Proprietary model utilizing transaction level data to identify names where short sellers are facing capital constraints, and therefore have increased potential to cover positions. Score of 1-10. Most likely to squeeze names have a rank closer to 1, and less likely to squeeze names have a score closer to 10. A score of 0 indicates negligible capital constraints as this security is not considered as highly shorted.

**VWAF** – Volume Weighted Average Fee.

**Short loan Value** - Value of securities on loan/borrowed with dividend trading and financing trades removed.
